On behalf of the FANTOM II investigators

# The FANTOM BRS

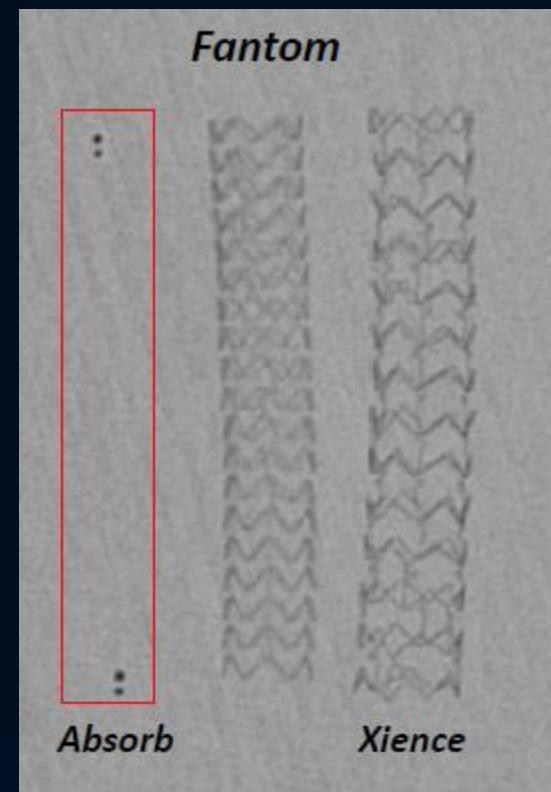

- Desaminotyrosine based polycarbonate backbone
- Strut thickness 125 $\mu$ m
- Sirolimus eluting for 3 months
- Full resorption within 3-4 years

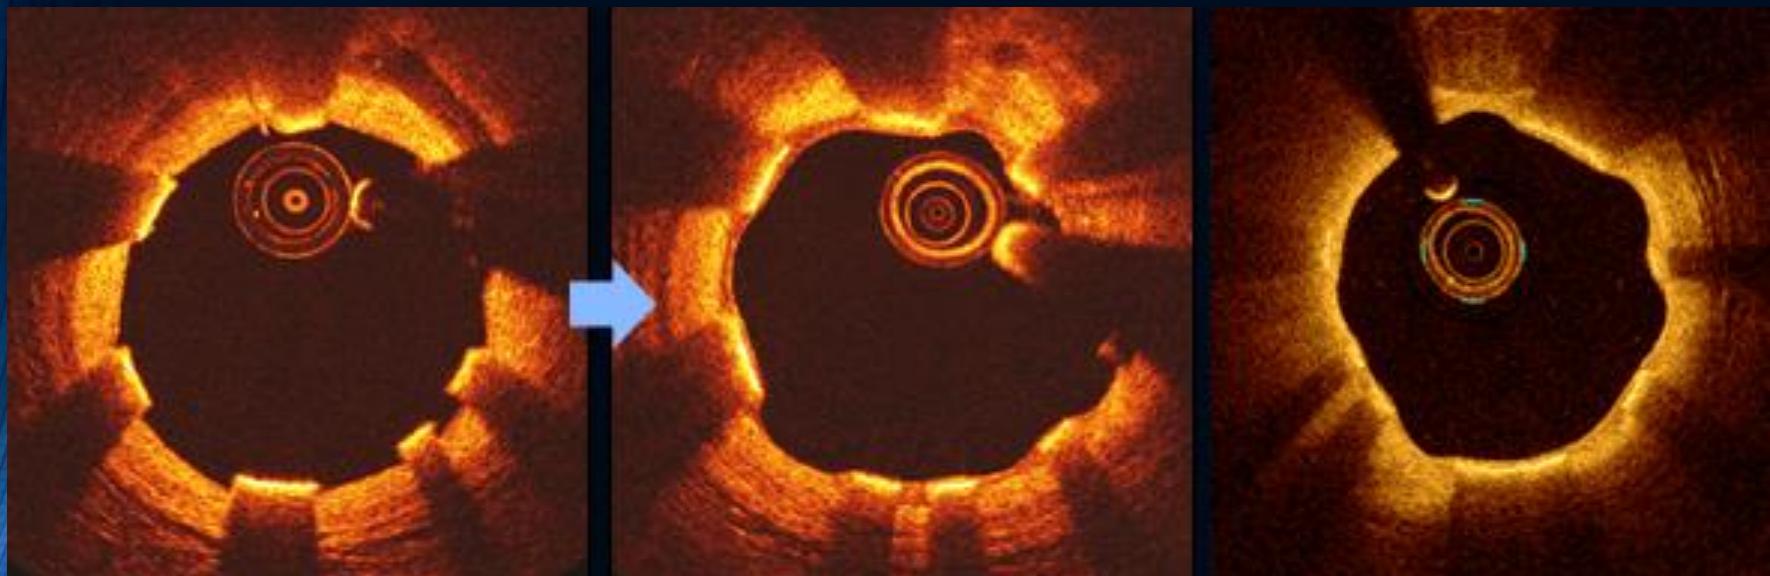

# FANTOM angiographic signature

- Radiopacity
- Covalently bound iodine in the polycarbonate backbone

# FANTOM OCT signature

Baseline

6 month FU

9 month FU

Strut-level results

# Conclusion

**The Fantom BRS show promising healing patterns after 6 and 9 months**

- OCT properties allows for in-procedure 3D evaluation
- Expected slight decrease in lumen area after 9 months
- No stent area reduction – no late recoil
- High completeness of strut coverage
- Limited neointimal growth
- Excellent resolution of acute extra-stent lumen and malapposition
